# Humbrol™ 3D CREATOR

Platform Levelling

Platform Levelling must be performed prior to first print or when prints are not sticking to the printing platform

Print button

1. Plug the printer into the mains power supply using the 'Power Supply' provided. You should notice the 'Print' button on the front of the 3D printer light up solid green.

1

2. Press the 'Home' button 🏠 on the reverse of the printer to allow the printing head return to it's start position. Once finished, remove the 'Power Supply' cable from the printer.

2

Home button

3. *Attempt to* slot this piece of paper underneath the printer nozzle in one of the 4 corners of the printer bed; manually move the printer head if required (Ensure all power is disconnected).

3

Slide paper underneath nozzle

4. The piece of paper should be lightly pinched by the nozzle, but the paper should still be able to be removed with ease.

Adjustments can be made to the height of the printer bed using the screwdriver provided and adjusting the tightness of the screws in the 4 respective corners. Ensure all 4 corners of the print bed are adjusted accordingly.
